

Gimmel Workshare Professional Connector for EMC| Documentum Webtop

The Gimmel Workshare Professional Connector for EMC|Documentum Webtop (Webtop Connector) extends Workshare Professional’s document integrity, collaboration, change management and risk management capabilities to Documentum.

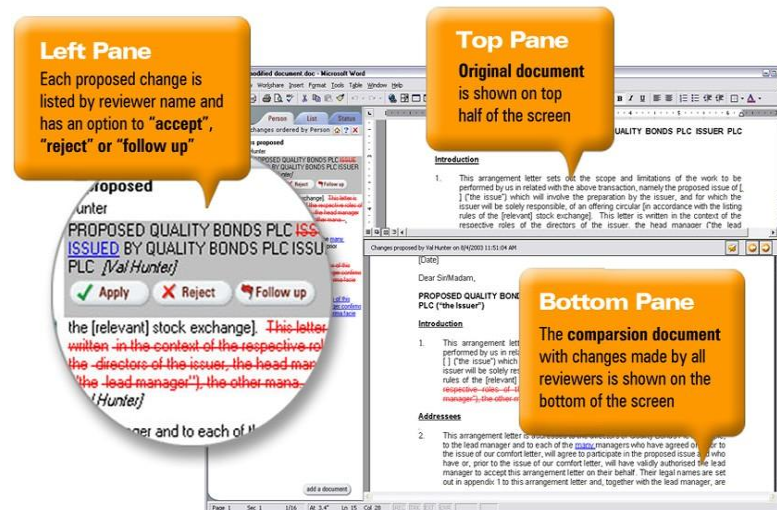

Value Propositions

- *Faster document search and access*
- *Improved security and control of documents*
- *Robust versioning, compliance and audit tracking*
- *More accurate document comparison*
- *Improved document integrity*

Workshare Professional simplifies the number of document versions managed by supporting parallel reviews, document comparison, validating the changes made to documents and ensuring the content in documents is not a security risk. Documentum provides enterprise content and document management solutions, including content storage services, business workflow capabilities, and document-level security. The Webtop Connector integrates custom-built code with standard components of Workshare Professional and EMC| Documentum, applying Gimmel's professional services to best meet enterprise collaboration needs.

Capabilities

The Webtop Connector links the full capabilities of Workshare Professional to Documentum, including document change management through email, document comparison and review, and PDF creation. Each of these capabilities is available in Workshare with storage of the documents in a Documentum library.

Simplify Email Collaboration

Workshare Professional eliminates document version proliferation by maintaining the master document. Once opened in Microsoft Word or Documentum, Workshare Professional provides the ability to email a document, including an attachment of a previous version of the document and a PDF copy. As revised email attachments are

returned, Workshare Professional automatically opens the original version from Documentum and identifies changes. The user can then accept or reject those edits into a single document version with one click.

Document Comparison and Review

From either Microsoft Word or the Workshare Compare module, Word and PDF documents may be opened for comparison from the Documentum repository, while giving users the ability to browse and open previous versions of a document. The resulting redline comparison of the documents or versions may be saved back to the Documentum repository as a new document, optionally with a Documentum relationship to either of the compared source documents.

Throughout this review cycle, the overall integrity of the document is ensured as the owner of the document has locked the document against unintended changes by “checking out” the document from Documentum.

Document Security

Workshare Professional has the ability to set an enterprise wide policy to remove sensitive information when documents are sent by e-mail. The product ensures that final documents do not include hidden comments, Microsoft Word Track Changes, author names or keywords that could present a business risk. Workshare Professional allows this information to be automatically removed from the document before the document is emailed or stored in the Documentum repository. In addition users can convert documents to PDF to lock down the content and enforce security settings such as prohibiting printing, modifying, or adding comments.

Environment and Platform

The Webtop Connector builds on standard EMC|Documentum platform components, using the web browser and Microsoft Office applications to ensure that the interface into EMC|Documentum is unchanged. The Webtop Connector is built using a web services layer that is included with the product.
