

Geographic Information Systems (GIS) Integration and Implementation Services

GIS supports the management, analysis, and visualization of spatial data. GIS has evolved from stand-alone systems to highly-integrated, enterprise applications – from narrowly-focused tools for specialist users to widely-used, map-based systems for the casual user.

The Challenge

Managing spatial or location-based information presents huge challenges across many organizations and industries. From specialized data management processes to complex geoprocessing applications, GIS implementation presents unique challenges to IT organizations. User demands are also growing – driving a need for more vertical applications with embedded GIS capabilities, more integration between GIS and other systems, and better user experiences.

The Gimmel Approach

Gimmel Group has established a successful track record as a leader and trusted advisor in enterprise content management (ECM) implementations and systems integration. Gimmel's approach builds on strong expertise in ECM and GIS and solid experience with enterprise implementations and integration. Key services and objectives include:

- Requirements definition for GIS applications
- Architecture and design to meet business needs
- Software evaluation and recommendations
- Development of customized software and connectors
- Solution implementation and rapid, cost-effective deployment
- Training and support during deployment and transition phases
- Knowledge transfer to support long-term

(see illustration on next page)

Value Propositions

- *Maximizing the value of spatial data with solutions designed for wider access and integrated systems*
- *Increasing productivity with tools linking spatial and unstructured data repositories*
- *Driving down costs through map-based applications built with the best-of-breed components*

GIS-ECM Architecture

Gimmel Differentiators

Gimmel Group has the expertise to build and deliver GIS systems to meet targeted business needs. From GIS program planning and requirements analysis, through design and development, organizations are able to quickly view and analyze integrated data and make informed decisions.

The Solution

The integration of spatial data with enterprise content management (ECM) systems allows organizations to streamline processes by establishing workflows and applications that manage location data with all related information.

For More Information

For more information regarding this solution, contact Gimmel Sales at 713-586-6500 or sales@gimmel.com.

About Gimmel Group

Gimmel Group is a nationally recognized consulting, professional services and solutions firm that helps the world's leading organizations improve business performance and compliance through the effective planning, implementation and integration of: Enterprise Content Management & Records Management (ECM/RM), Geographic Information Systems (GIS), and Web Design & User Experience.
