

Gimmel Migrate

Achieve the fastest migrations to Microsoft 365 with a simple and efficient solution

Gimmal Migrate helps organizations fully leverage Microsoft 365 by simplifying complex migrations from OpenText Content Server and Documentum to SharePoint Online. This turnkey solution ensures that all migrations are done accurately and efficiently through features like metadata mapping, link redirection, and support for all object types.

About Gimmal Migrate

Decommissioning OpenText Content Server or Documentum and migrating content to SharePoint Online is a complex and costly undertaking. Gimmal Migrate is an out-of-the-box software product that is coupled with a proven methodology to ensure rapid migration success.

Gimmal Migrate is a simple yet powerful desktop software product that provides all the capabilities to discover, analyze, map, and migrate content, metadata, folders, and more to SharePoint Online. Quick installation lets you be up and running in minutes and planning your migration. No server-side installations or configurations are required.

With Gimmal Migrate, you can ensure content and data is seamlessly migrated from Content Server, Livelink, or Documentum in a secure and efficient manner.

Key Benefits

Leverage Microsoft 365 Investment

Your organization has standardized on Microsoft 365 as their cloud platform. It's your platform of the future. Why continue to pay high maintenance and upgrade costs for a legacy, on-premise system you no longer need? By migrating content from OpenText Content Server, Livelink, or Documentum to Microsoft 365, you can empower your users and increase productivity while also achieving large cost savings. Gain the benefits of a modern cloud platform with more functionality than OpenText can offer.

Simplify Complex Migrations

Migration doesn't have to be a long, complex process. With Gimmal Migrate, you can be up and running in minutes. Just install the software on your desktop and run the analysis wizards for discovery and analysis of your OpenText environment. Then, create mappings for metadata, object types, information architecture, record policies, and more. When you have everything configured the way you want, one click of a button begins the migration process. Schedule migrations for off-peak hours to maximize throughput and minimize network load and throttling.

Ensure Migration Success

Reports and logs accurately reflect the migration process and flag any issues that require resolution. They provide an audit trail and chain of custody of all content and data migrated. During migration, OpenText links can be automatically redirected to the new location in Microsoft 365, removing the need to edit hundreds or thousands of legacy links.

Features

Easy Installation

Install right on the desktop. No server-side installs or configurations required. Lowers or eliminates needed IT support.

Permissions

Map permissions and group mappings to SharePoint. Identify missing users and capture legacy user version history.

Rapid Configuration

Use a simple Analysis Wizard interface for migration planning. Identify any migration issues upfront prior to beginning migration. Perform a direct migration to SharePoint Online, no intermediate steps required. Store and reuse migration profiles for incremental or future migrations.

Link Management

Preserve your legacy document links from emails, documents, shortcuts, and 3rd party application links. Remove the need to modify or edit hundreds or thousands of documents.

Attributes and Metadata

Map Category or Attribute data in OpenText to SharePoint Content Types or Columns or update metadata in bulk where required.

Information Architecture

Restructure your legacy information architecture. Move folders, shorten paths, and exclude data from your migration plan. Move from Enterprise or Personal workspaces and create SharePoint libraries on demand during migration.

Information Governance

Migrate records management classifications and other policies. Preserve created dates, last modified dates, created by and modified by information. Move full or partial version trees with major and/or minor versions. Perform audit logging for all migration operations.

Broad Platform Support

Easily migrate content from OpenText Livelink 9.x, Content Server 10.x or 16.x, or Documentum with the click of a button. Migrate content to SharePoint Online, SharePoint, or file shares.

Gimmel allows users to take control of their information with software that discovers, captures, manages, governs, and archives information so you can focus on your core mission. Gimmel software allows you to fully manage the lifecycle of content in SharePoint, Office 365, box, SAP, and other platforms.
