

Gimmel Link

Easily connect SAP and SharePoint content, data, and processes.

Gimmel Link stores SAP content and data within Microsoft SharePoint and Microsoft 365 while leaving the SAP environment and the SAP end user's view unchanged. This integration allows users inside and outside of SAP to collaborate and work on the same document-centric business processes while reducing total cost of ownership.

Key Benefits

Improve collaboration and productivity

Make SAP information easily accessible to personnel enterprise-wide by storing it within SharePoint and Microsoft 365. Users can streamline business processes by merging transactional information with enterprise information, reduce search time with advanced metadata, and improve collaboration with Microsoft workflow tools and business applications.

Secure SAP information

Gimmel Link removes the long-term risk associated with storing information inside of SAP by archiving, not only content, but data and processes as well. Once in Microsoft SharePoint, SAP content can be managed with advanced records management capabilities, improving information governance, compliance, and security.

Reduce total cost of ownership

Gimmel Link dramatically reduces SAP's total cost of ownership by reducing the size of the HANA database by as much as 30-40%. Organizations see significant cost savings by storing SAP content within Microsoft's considerably less expensive Azure/Microsoft 365 platforms, which also reduces the need for expensive SAP licenses, training, development, and upgrades.

Deployment Methods

Cloud

On Premises

On-Premise and
Cloud-based Hybrid

Features

System Integration

Unify SAP and SharePoint systems, content, and metadata

Content Sharing

Access unstructured SAP content in SharePoint and Microsoft 365

Content Tagging

Apply metadata tags to content within SAP from SharePoint

Records Management

Manage your corporate SAP records within SharePoint with advanced records management capabilities

Unlimited User Access

Support as many SAP users as your company needs

Microsoft 365 ADG Access

Allow usage of Microsoft 365 Advanced Data Governance with your SAP content

Advanced Search

Improve accessibility with metadata-driven, rich document search through SharePoint and Microsoft 365

Document Filing

Automatically file documents in appropriate document libraries with both SharePoint and SAP metadata

"We were able to reduce our SAP database footprint by 30% Gimmel Link"

- Jeff Stewart, GM Information Services, Wilmar Australia

Gimmel simplifies records and information management with software that captures, manages, governs, and archives information so you can focus on your core mission. Gimmel software allows you to fully manage the lifecycle of content in SharePoint, Microsoft 365, box, SAP, and other platforms.
