

Gimmel Discover

Locate, classify, and manage data in order to mitigate privacy risks and protect sensitive information

Gimmal Discover simplifies the management of sensitive information across the enterprise by locating, classifying and managing data to reduce risk and improve organizational efficiency. Gimmal Discover streamlines e-discovery with a cloud-based solution that ensures information is private and available when requested.

Key Benefits

Mitigate risk buried in unstructured content

When personally identifiable information (PII) and other sensitive data is left unmanaged, it can become lost in corporate data sources. This poses great risks for organizations. Gimmal Discover mitigates these risks by identifying files that contain sensitive information and applying the appropriate metadata to govern content according to your information governance program.

Eliminate redundant, obsolete, and trivial (ROT) information to improve user efficiency

Global research and advisory analysts estimate that nearly 80% of data in the average organization is unstructured. Much of this content is not critical to business operations and subsequently bloats content sources. Gimmal Discover provides the ability to eliminate unnecessary content by:

- Discovering redundant or duplicate files
- Removing obsolete files that are no longer needed
- Removing trivial files that should not be kept

Streamline E-Discovery and Public Records Requests

When organizations have to comply with a public records request or perform e-discovery as part of litigation the time and costs associated with searching for data across the enterprise becomes burdensome. Gimmal Discover allows organizations to achieve full visibility of all sensitive information with:

- A single solution to locate and collect data across the entire enterprise
- The ability to easily perform a first-pass review
- Notifications that alert custodians to their litigation hold responsibility

Data governance in:

SharePoint

box

OneDrive

G Suite

Exchange

Workstations and Laptops

File Shares

Features

E-Discovery

Locate relevant information for litigation or internal investigations

File Analysis

Gain complete visibility of information and its attributes in all data sources, including workstations and laptops

Content Awareness

Ensure sensitive information is managed properly by knowing exactly where it is and who has access to it

Tagging and Classification

Apply classification tags based on content to track information that may be confidential or sensitive

Information Management

Integrate with Gimmal Records to manage the entire lifecycle of information after discovery

Reporting

Manage unstructured data by producing detailed reports that improve organizational efficiency

Compliance

Implement rule-based workflows to adhere to your information policy

Active Remediation

Create policies to consistently govern data based on orchestrated workflows

Gimmel's information governance solutions have been helping clients take control of their information for over 18 years by combating risks associated with critical business information and enabling the ability to control content sprawl, reduce high infrastructure costs, and locate appropriate information when needed. Gimmel's software helps streamline discovery, migration, governance, and compliance of information without impacting end users.
