# Energy company achieves substantial cost savings via Microsoft 365 migration

Energie Beheer Nederland (EBN) is an energy transition company entirely owned by the Dutch state. Its main focus is on oil and gas, but EBN also works in carbon capture, utilization, and storage (CCUS), as well as geothermal. As a government-owned organization, EBN is continuously focused on adopting and employing strategic and cost-

effective solutions. During an analysis of its current systems, EBN decided that decommissioning its existing document management system and migrating to the Microsoft cloud would result in significant cost-savings. EBN choose Gimmel Migrate to achieve a quick and efficient migration of its data and information to Microsoft 365.

## AT A GLANCE

Customer: Energie Beheer Nederland

Country: Netherlands

Website: <https://www.ebn.nl/en/>

Industry: Energy

Customer Size: Medium (50 - 999 employees)

Products and Services: Microsoft 365 and Azure

# Gimmel LLC, Energie Beheer Nederland (EBN), & Microsoft 365, SharePoint, and Azure

## Customer Challenges

EBN was using Microsoft products for various business purposes, but the organization realized that its OpenText Content Server environment was essentially duplicating the functionality of its Microsoft 365 platform.

The company recognized that migrating all of its enterprise content management to Microsoft 365 was the best strategic decision for cutting costs and more fully utilizing the cloud platform. For the strategy to work, though, EBN needed to quickly migrate a large amount of content before an upcoming round of OpenText licensing and support fees came due.

## Partner Solution

With its proven methodology and easy-to-use migration solution, Gimmel Migrate was identified by EBN as its best option for making the migration to Microsoft SharePoint as smooth as possible. Before the migration, Gimmel Migrate mapped all required metadata to address potential risks and ensure that content migrated via Azure to SharePoint was moved as quickly as possible.

After the migration, the content was effectively restructured in SharePoint, and EBN was able to create migration and validation logs for added insurance.

## Customer Benefits

Despite the short timeframe, EBN successfully migrated four terabytes (TB) of content to Microsoft 365. All of its documents, older versions of assets, dates, user information, metadata, and folder structures were preserved, and the organization is now using a future-proof, secure platform for document management.

Thanks to comprehensive migration planning on the part of Gimmel, EBN was able to complete the migration within the short timeframe it had.

EBN is now realizing substantial cost savings by eliminating an expensive legacy system and embracing Microsoft 365.

User adoption was ensured, because the Microsoft 365 platform was already used in many EBN business processes.
